Detailed Action

The following is responsive to the preliminary amendment received March 2, 2004.

Claims 1-63 are cancelled. New claims 64-74 are added.

Claims 64-74 are currently pending.

Priority

The status of nonprovisional parent application(s) (whether patented or abandoned) should also be included. If a parent application has become a patent, the expression "now Patent No. ____" should follow the filing date of the parent application. The Examiner respectfully requests that Applicant update the status of parent application 09/828,326 to include the patent number 6,750,061.

Abstract

Applicant is reminded of the proper language and format for an abstract of the disclosure. The abstract should be in narrative form and generally limited to a single paragraph **on a separate sheet** within the range of 50 to 150 words.

Drawings

The drawings are objected to as failing to comply with 37 CFR 1.84(p)(5) because they include the following reference character(s) not mentioned in the description: Fig. 9a and 9b. Corrected drawing sheets in compliance with 37 CFR

Art Unit: 1614

1.121(d), or amendment to the specification to add the reference character(s) in the description in compliance with 37 CFR 1.121(b) are required in reply to the Office action to avoid abandonment of the application. Any amended replacement drawing sheet should include all of the figures appearing on the immediate prior version of the sheet, even if only one figure is being amended. The replacement sheet(s) should be labeled "Replacement Sheet" in the page header (as per 37 CFR 1.84(c)) so as not to obstruct any portion of the drawing figures. If the changes are not accepted by the examiner, the applicant will be notified and informed of any required corrective action in the next Office action. The objection to the drawings will not be held in abeyance.

Information Disclosure Statement(s)

Applicant's Information Disclosure Statement received March 2, 2004 has been considered in part, i.e. US patents only. The remaining references will be considered upon receipt of the parent application(s). Please refer to Applicant's copy of the 1449 submitted herewith.

Claim Objection(s)

1. Claim 73 is objected to because of the following informalities: in order to be consistent with the language of claim 72, in claim 73, line 1, after "coupling", "agent" should be cancelled and replaced with --reagent--. Also, at line 2, after "terminating", the term "agent" should be cancelled and replaced with --reagent--. Appropriate correction is required.

Double Patenting

The nonstatutory double patenting rejection is based on a judicially created doctrine grounded in public policy (a policy reflected in the statute) so as to prevent the unjustified or improper timewise extension of the "right to exclude" granted by a patent and to prevent possible harassment by multiple assignees. See *In re Goodman*, 11 F.3d 1046, 29 USPQ2d 2010 (Fed. Cir. 1993); *In re Longi*, 759 F.2d 887, 225 USPQ 645 (Fed. Cir. 1985); *In re Van Ornum*, 686 F.2d 937, 214 USPQ 761 (CCPA 1982); *In re Vogel*, 422 F.2d 438, 164 USPQ 619 (CCPA 1970); and, *In re Thorington*, 418 F.2d 528, 163 USPQ 644 (CCPA 1969).

A timely filed terminal disclaimer in compliance with 37 CFR 1.321(c) may be used to overcome an actual or provisional rejection based on a nonstatutory double patenting ground provided the conflicting application or patent is shown to be commonly owned with this application. See 37 CFR 1.130(b).

Effective January 1, 1994, a registered attorney or agent of record may sign a terminal disclaimer. A terminal disclaimer signed by the assignee must fully comply with 37 CFR 3.73(b).

2. Claims 64-68, 71-74 are rejected under the judicially created doctrine of obviousness-type double patenting as being unpatentable over claims 1-9 of U.S. Patent No. 6,750,061. An obviousness-type double patenting rejection is appropriate where the conflicting claims are not identical, but an examined application claim is not patentably distinct from the reference claim(s) because the examined claim is either anticipated by, or would have been obvious over, the reference claim(s). See *In re Berg*, 140 F.3d 1428, 46 USPQ2d 1226 (Fed. Cir. 1998); *In re Goodman*, 11 F.3d 1046, 29 USPQ2d 2010 (Fed. Cir. 1993); *In re Longi*, 759 F.2d 887, 225 USPQ 645 (Fed. Cir. 1985). Although the conflicting claims are not identical, they are not patentably distinct from each other because the claims of the instant application are generic to all that is recited in the claims 1-9 of USPN '061. That is, the claims of USPN '061 fall entirely within the scope of the claims of the instant application. In other words, the claims of the

Art Unit: 1614

instant application are anticipated by claims 1-9 of USPN '061. Specifically, the claims of USPN '061 recite a method of identifying a covalent modification of an amino acid residue in a polypeptide chain comprising detecting a mass difference between a formed polypeptide and a modified polypeptide by mass spectrometry wherein the claims recite that the type of mass spectrometry used is laser desorption mass spectrometry.

Conclusion

Claims 64-68, 71-74 are rejected.

Claims 69-70 are objected to.
